

INHOUSE COMPUTE

PRIVATE AI ON HARDWARE THE CUSTOMER CONTROLS

\$999 private AI pilot

Two weeks. One workflow. One team.

THE JOB

Give one team fast, cited answers from approved SOPs, work instructions, manuals, quality procedures, or training material - without making an ordinary public AI service the default destination for those documents.

WHAT WE DELIVER

- A free fit call and readiness review before any paid work.
- A two-week private AI workspace on compatible customer-owned hardware.
- Standard document ingestion plus self-service uploads; no arbitrary file-count cap.
- Cited answers, refusal behavior, representative testing, and guided use.
- A closeout decision: expand, extend under new terms, or remove InHouse access.

PILOT BOUNDARY

- One primary workflow, one workspace, and one agreed pilot team.
- Read-only answers with citations to source material.
- No production-system automation or autonomous decisions.
- Extensive OCR, data repair, unusual media, or custom integrations are separately scoped.
- No CUI, export-controlled, classified, patient, or other regulated data unless separately approved in writing.

SUCCESS MEANS

- Users find approved answers faster than the current workflow.
- Answers point to the correct source and section.
- Access is limited to agreed users.
- The customer can use uploads, review sources, and stop the system.
- The pilot produces evidence to expand, revise, or stop.

COMMERCIAL PATH

FIT + READINESS

FREE

Confirm workflow, hardware compatibility, data boundary, and whether the pilot is worth doing.

PRIVATE AI PILOT

\$999

Run the complete two-week experience on compatible customer-owned hardware.

TEMP APPLIANCE

+\$1,000

Use an InHouse pilot appliance for up to 14 days, subject to actual availability.

Production deployment starts at \$4,999. The eligible \$999 pilot fee is credited when production is signed within 30 days.

FIVE QUESTIONS BEFORE PRICING

- Which documents and repeated questions matter most?
- Who owns the outcome and who will use it?
- Where must the documents and system reside?
- What data or workflows must be excluded?
- What measurable result would justify continuing?

Start with the free fit call and readiness review.

No equipment is ordered and no paid work begins until scope is accepted and funds clear.
